

Non-Escalated Incidents	
Customer Type	Incident Title Requirement
Campus-Based Customers Remote Claims Customers CWS Partner (TTec/AFNI/Teleperformance)	[CWS (if applicable)] + [Specific Application/Hardware] + [Error or high-level summary of issue/request] Example: <i>Outlook – Cannot open – Stuck Processing</i> <i>TTec – Finesse – Unable to login – Error: Could not find Agent object</i> <i>AFNI – Finesse – Unable to login – Error: Could not find Agent object</i>
Escalated Incidents – Single User Issue	
Customer Type	Incident Title Requirement
Campus-Based Customers	[Building Name/Location] + [Specific Application/Hardware] + [Error or high-level summary of issue/request] Examples: <i>Fairways – NICE – Unable to play recording</i> <i>Alpha North – NICE – Unable to play recording</i>
CWS Partner (TTec/AFNI/Teleperformance) Remote Customers	[CWS (if applicable)] + [City & State] + [Specific Application/Hardware] + [Error or high-level summary of issue/request] Examples: <i>Teleperformance – Finesse – Unable to hear through headset</i> <i>TTec – AnyConnect – Unable to connect – Error: Auth. Failed</i> <i>Boise, ID – APU – Parts not transferring – Error: Java out of date</i>
VIP Customers Customer is Down or High Impact *ONLY when escalating to EUC or VIO*	Follow all format requirements from: Escalating Incidents – Single User Issue. Add the following to the title's beginning (only 1 term is needed): VIP (all caps) for all customers with VIP tag in SMART IT. DOWN (all caps) when customer is entirely down, and you cannot resolve. (Hotswaps are EXCLUDED). NOTE: Support resources <u>must</u> be notified when VIP incidents are being escalated, per KBA00016767. Examples: <i>VIP – Fairways – Laptop – Keeps shutting down on its own</i> <i>DOWN – TTec – Daytona, FL – Virtual Machine – Unable to login to VM</i>
Escalated Incidents – Multiple User Issue	
Customer Type	Incident Title Requirement
Campus-Based Customers Multiple Users Affected	[Building Name/Location] + [Specific Application/Hardware] + [Number of people affected] + [Error or high-level summary of issue/request] Examples: <i>Fairways – Mitchell Decision Point – 45 – slow response times</i> <i>Alpha North – Mitchell Decision Point – 15 – slow response times</i>

CWS Partner (TTec/AFNI/ Teleperformance) Remote Claims Customers Multiple Users Affected	[CWS (if applicable)] + [City & State] + [Specific Application/Hardware] + [Number of people affected] + [Error or high-level summary of issue/request] Examples: AFNI – Augusta, GA – Finesse – 25 – Unable to hear through headset Daytona, FL – Finesse – 150 – Not getting any calls
---	--

HIGH IMPACT: The customer is totally down; you cannot resolve and must escalate incident to End User Computing (EUC) or Voice Infrastructure Operations (VIO) groups. These incidents are flagged in their queue to address.

Note: The **DOWN** process is an internal process for incident handling only. Do not offer explanations or expectations of the **DOWN** process to customers.

When following the **DOWN** process, advise the customer when escalating:

“I am escalating your incident with the details of your issue and the impact to you has been noted.”

Do not tag incidents as **DOWN** if the customer is affected by a current outage with an original incident. Creating the relationship to the original outage ticket is all that is required in these cases.

Use **VIP** (instead of **DOWN**) if the customer is identified as **VIP** in **SMART IT**. The **VIP** tag will appear next to their name.

- **VIP** tickets will need to be escalated to **Executive Support EUC Ops** queue instead of normal queues. This is **important**!
- **VIP** incidents being escalated **must** have their incident number provided to support resources **before** escalating the incident.

Examples of **DOWN** issues:

End User Computing (EUC):

- VPN dropping repeatedly (interfering with ability to work consistently).
- Unable to log onto their primary computer (virtual or physical) due to connectivity or password issues, including domain and trust relationship errors.
- Not able to set up HBA Mini or user cannot access virtual machine.
- Not able to connect to the Progressive network.
- Office network printer is down for everyone and is the **only** printer in the office.

Voice Infrastructure Operations (VIO):

- Unable to login to their phone and it their primary job function uses it.
 - For example, the person works with external Progressive customers.
- Constant dropping of calls or degraded audio where they cannot take calls.
- Their manager has given them instructions not to take any more calls.

Not a **DOWN** ticket if:

HOTSWAPS:

- **Service Desk ordered a hotswap:** Follow the normal process; do not mark as **DOWN**. Nothing else can be done; it's excluded from this process.
- **Service Desk has not ordered a hotswap and the computer is completely down and inaccessible:** The **DOWN** process applies; considered **High Impact**.

End User Computing (EUC):

- It does not meet work interruption criteria or customer/supervisor requests it.
- The customer has repeated callbacks on an issue that does not meet criteria.
- Outlook, Calendar, Office apps, etc. do not qualify as **DOWN**.
- Inconveniences: resolution, font sizes, second monitor not working, etc.

Voice Infrastructure Operations (VIO):

- It does **not** meet work stoppage criteria, or the customer/supervisor is requesting it. Contact support resources in these cases.
- Intermittently having (less than five times per day) static, dropped calls, or being unable to call non-Progressive numbers.
- Not receiving ACD queue calls in Finesse or getting incorrectly routed calls.
- The customer has repeated callbacks on an issue that does **not** meet criteria.
- **NICE** issues do not qualify.
- Inconveniences such as issues with phone stats and reports.

NOTE: You must confirm all **DOWN incidents with your support resources before escalating to the appropriate support group. If you are unsure if an incident qualifies as **DOWN**, reach out to a support resource for confirmation.**
