Escalation Team: TAs Squad Leads BMC Support

July 2026

Agenda

Who are the Escalation team members?

What does the Escalation team do?

What is the BMC Chat?

What are the BMC Chat Requirements?

What is the process when support cannot be reached?

BMC Chat Demo

BMC Chat

What does the Escalation Team do?

- The group to reach out to when unable to locate a KBA to assist in troubleshooting.
- The group that performs follow up on incidents and events.
- The group that works projects for managers and other departments.
- The group that assists in meeting metric standards for the department.

Who You Will Actually Reach

Consider the Escalation Team as three support lanes rather than individual names. Let the situation determine the lane.

Squad TAs

Day-to-day assigned support lane responsible for coaching, follow-up, squad questions, and practical next steps.

When to use it

Coaching, QA, call review, or squad-level guidance → Squad TA / Squad Lead.

ETH / BMC TAs

The live support lane for active incidents when your ticket is saved, troubleshooting is documented, and you have a clear ask.

When to use it

Saved ticket + clear ask → BMC Support Chat.

Leadership

Direction, process clarity, follow-up ownership, or situations that require lead / manager involvement.

When to use it

Process clarity, ownership, or leadership decision → Team Lead / Manager.

Names matter later. Lanes matter first — follow the lane rather than guessing the person.

“

“Effective Teamwork
Begins And Ends
With Communication”

Mike Krzyzewski

What is the BMC Support Chat?

The live chat channel that connects you with the Escalation Team when additional support is needed or as directed by a KBA. Review: BMC Live Chat Guidelines

1 What it is

A real-time chat support channel

Staffed by the Escalation Team, including Tech Assists and Squad Leads

Live assistance while you work an active incident

2 When you use it

No applicable KBA or designated path

Basic troubleshooting and KBA search already completed

Escalation-level tools or guidance are required

3 How you reach it

Open BMC Helix: More > ETH - Service Desk Only

Select your service queue

Post the Incident Number and Incident Summary

BMC Chat connects you with a Tech Assist in real time. Bring a saved incident and a clear question.

BMC Chat Requirements

Use BMC Chat when additional support is needed, and arrive with the incident fully prepared.

1 When BMC makes sense

No applicable KBA or designated path
KBA steps completed without success
Escalation-level tools are required
Next steps are unclear or no relevant KBA exists
Follow-up technology or process question

2 Before you open chat

Basic troubleshooting attempted
Incident saved with all troubleshooting steps documented
All required ticket details completed

3 Start the chat correctly

Open from BMC Helix: More > ETH - Service Desk Only
Begin with Incident Number + Incident Summary
State the exact help you need

Complete this checklist before reaching out

- | | | |
|-----------------------------------|--------------------------------------|-------------------------------|
| ✓ Incident created and saved | ✓ Correct customer/contact | ✓ Troubleshooting documented |
| ✓ KBA searched, or none available | ✓ Screenshots or error text attached | ✓ Specific question/ask ready |

If the incident is not saved or required information is missing, support may ask you to complete it first.

What does a good BMC reach look like?

The first line becomes the chat header, so make it useful.

Strong Reach

INC000123456 – Outlook – Unable to get email

Customer receives send/receive error. Started today. One user affected. Searched Outlook send/receive KBAs, recreated profile, screenshot attached. Need confirmation on next step or escalation path.

Clear question: “Can someone confirm next troubleshooting step?”

Avoid This

“Can someone help?”

“Anybody available?”

“INC123456”

Incident URL only

Full activity log pasted into chat

These requests create additional back-and-forth because support cannot identify the issue being worked or the help required.

Required format: INC # – Application – Issue | Include what you tried | Ask the exact question you need answered

While Waiting: What Should a Technician Do?

Keep moving the issue forward and keep the incident readable.

Keep working the issue

- Continue basic troubleshooting
- Review additional KBAs
- Try stronger search terms
- Check prior incidents
- Confirm issue scope and impact

Keep gathering evidence

- Capture screenshots
- Copy exact error wording
- Confirm when it last worked
- Identify if more than one user is affected
- Prepare a short support summary

Keep documenting

- Save the incident before reaching out
- Update Activity Log as work occurs
- Document that support was engaged
- Document who assisted and what guidance was given

Be ready to share these updates with support:

Issue | Impact | Troubleshooting completed | Exact question / blocker

Avoid the following:

Pasting the full activity log | Switching to a different service queue | Escalating without TA direction | Leaving the ticket undocumented

Use your wait time productively. Continue researching and troubleshooting the issue while you await a response.

Live Demo: BMC Support Chat

A walkthrough of starting a chat the right way, step by step.

Watch for: The first line becomes the chat header—keep it as INC # – Application – Issue and never paste the full activity log.

What Happens When Support Is Not Available?

The wait-time process for BMC Live Chat. Remain in the chat path and allow the system to route your request.

Sequence to remember: BMC Chat (More > ETH) → 8 minutes → overflow reroute → 2 minutes → Backup Chat in Teams → rejoin the same ticket if the chat closes.

The system routes you to the appropriate group — select the BMC chat group that fits your issue.

Backup Chat in Microsoft Teams

The overflow channel that pulls extra TAs onto a chat that has waited too long. Link to the [BMC Backup Chat](#)

Why it exists

When a support chat sits unanswered too long, the Backup Chat channel alerts extra TAs so the requester is not left waiting.

How to post

Open the Backup Chat channel in Microsoft Teams and post that a chat is waiting, including your incident number. This notifies the entire Escalation desk that you are awaiting a response.

Post here only after waiting a full 10 minutes for a response within BMC Support Chat.

KBA Flagger App

Flag knowledge base content that is unclear, outdated, or needs improvement. Links to [KBA Flagger Guide](#) [KBA Flagger Tool](#)

Why it matters

- Technicians use the SMART IT knowledge base daily.
- Flagging keeps content current, accurate, and easy to follow.
- Fewer workflow interruptions for technicians and TAs.

What to submit

- Include the KBA number and article section.
- Add the related incident and a clear description.
- Attach screenshots for extra context.

Review and impact

- TAs approve, reject, or escalate each flag.
- All outcomes are documented in the app.
- Focus on quality over quantity.

Well-documented, thoughtful flags improve the knowledge base for every technician.

Summary

- **Who to reach:** Leadership, Squad TAs, and ETH TAs each own a lane — go to the right lane, not a specific name.
- **What we do:** Escalate when there's no KBA, drive follow-up, run projects, and track the metrics behind support.
- **How to reach us:** Open BMC Support Chat → More → ETH – Service Desk Only.
- **Show up ready:** Save the incident, document your steps, search the KBA first, and lead with a clear ask — INC # – Application – Issue.
- **If support is delayed:** Chat reroutes at 8 minutes; after 10, use the Backup Chat in Teams — and rejoin if a chat closes.
- **Keep knowledge strong:** Search the knowledge base by title, and flag any KBA that is missing or inaccurate, so the next technician finds the right answer faster.

A clean, saved ticket plus a clear ask is the fastest way to get help. Any questions?
